1912

1721. Ranunculus septentrionalis
Common! Buds are swelling,
give out branches with terminal fls,
which may become another bud.
Stipules well developed.
Tungsten Spring (almost in branch)
4-7-39.

1722. Ranunculus ^{? microanthus} septentrionalis
~~Aster~~ Abundant on floor of
valley west of Tungsten (N)
Leaves not so divided, stipules
smaller, fls. not yet apparent.
Somewhat approaches R. hispida fabers.
4-7-39.

1723. Aster. ? Drummondii

Ashland Hill High Reserve 4-10-39

near head of lake (located of 1851)

low mountain, produced up above.
